SEAMS UNLIMITED

A strong connection for your applications
A strong connection – Around the world
Since our merger as A&E Gütermann in 2014, we support your value chain worldwide. The smooth flow of materials and information minimizes your costs and creates transparency.

‘We see our customers as our partners. Their challenges are also our challenges.’
A SPECIALISED ALL-ROUNDER

The name Gütermann has stood for premium quality for over 150 years. In the textile industry, that means perfect seams – through uniformity, a silky shine, a smooth texture, tear resistance and maximum flexibility. To offer our customers sustainable support, we also need to be flexible in how we approach the requirements of today’s market and current fashion trends.

Our products have grown countinously with these requirements. We produce sewing thread products for the consumer, industry and automotive sectors which are precisely designed to meet the needs of our customers. They are carefully developed by our textile specialists so that they always have the same quality. The standards that we apply are set by our master product ‘Mara’, which is well-known throughout the industry for its high quality. When manufacturing processes reach their limits, we take things to the next level. We optimise our technologies and keep up with the latest developments in research. That’s how innovation happens. And the quality promise of A&E Gütermann remains.

Your perfect seam starts with our employees. In the past, workers worked in isolation on their specific craft, but the needs of modern society require teams of interdisciplinary specialists. In our plants in Germany and Slovenia, highly specialised textile technologists, engineers, chemists and dyers work together to ensure that all details are coordinated.

QUALITY MADE IN EUROPE
CUSTOMISED SOLUTIONS
STRONG RELATIONSHIPS
Saving water in the textile industry
A&E Gütermann aims to reduce water consumption in all of its sites worldwide. A hydropower plant provides the water supply for our entire production in Gutach im Breisgau. Many of our plants process wastewater into drinking water.

‘Innovation is not an end in itself. It is always a response to the challenges of our partners.’
Our Contribution to Sustainable Textiles

Our responsibility starts at our own doorstep – and applies to all activities worldwide. The textile industry is undergoing a period of change and is in urgent need of ecological production processes. We support the sustainable value creation of our customers by investing in renewable energies and by reducing the environmental impact through innovative processes and technologies.

We have been complying with the specifications and guidelines of the OEKO-TEX® Standard 100 for many years. We are also committed to avoiding the use of certain chemicals in our production. In addition, we also comply strictly with the European chemicals regulation REACH. And this applies not only throughout Europe, but in the whole world, ever since our merger in 2014 as an international thread manufacturer. We also aim to have a zero-waste policy.

Our production sites in Sri Lanka and the USA have already stopped producing landfill waste. In other countries, we are close to achieving the same. We also largely avoid plastic waste in our packaging. Where possible, we agree with our customers to avoid the use of any unnecessary packaging.

An important step on the way to a sustainable textile industry is to reduce water consumption. Many of our plants – from Schwarzwald to Bangladesh – filter wastewater and process it into drinking water. In addition to this, 100% of the electricity consumption at our plant in Gutach im Breisgau comes from hydropower.

The increasing demand for environmentally friendly thread products continues to drive innovation. For this reason, we have developed a variety of recycling threads whose raw material is derived from PET bottles.
SIMPLIFYING PROCESSES

With our fully integrated production and storage facilities in the heart of Europe, we give our customers a decisive competitive advantage: a secure value chain, supported by lean logistics, fast production and absolute delivery reliability.

We respond highly individually to different production runs and packaging specifications. A dense network of production companies and subsidiaries as well as trading partners ensures that our products are guaranteed to be at the right place at the right time. Not just in Europe, but worldwide.

A wide choice of products, full support
Our broad range of sewing threads offers you a variety of colours. Whether the seam should merge tone-in-tone with the material or should highlight visual accents, you will definitely find the right colour with us. Thanks to our digital solutions, the process is even faster and easier. In addition, with the use of ANECALC and ANETRACK, you can identify your sewing thread consumption.

Even in the age of digital communication, direct personal interaction is still very important to us. Our team of consultants, with their wide range of expertise, and our Seam Competence Centre will support you with information about products, sewing technology and individual solutions. If required, we are also happy to visit you on-site.
